

TNG trajectory library - Feature #1196

High- and Low-level API functions

03/18/2013 04:15 PM - Rossen Apostolov

Status:	Closed	
Priority:	Normal	
Assignee:	Magnus Lundborg	
Category:		
Target version:	version 2	
Description		
The functions in the API can be separated into a high- and low-level ones by providing two different header files for each set. It may be good to avoid duplication of the functions. One possibility is for the high-level ones to be the same as some of the low-level functions but with reduced features and sane defaults.		

History

#1 - 04/24/2013 09:33 AM - Magnus Lundborg

- Assignee set to Magnus Lundborg

#2 - 06/25/2013 10:06 PM - Magnus Lundborg

- Status changed from New to In Progress

High-level and low-level functions are all in the same header and can be used in combination without any restrictions. High-level API functions have tng_util_ as prefix instead of only tng_.

#3 - 10/25/2013 09:18 AM - Magnus Lundborg

- Status changed from In Progress to Closed

The high-level API will continue to expand (like the low-level API) for another while. But it's there and seems to work OK.
