Gromacs - Bug #1282

fix to use more obvious Blue Gene/Q compiler wrappers

06/16/2013 09:16 PM - Jeff Hammond

Status: Closed
Priority: Low
Assignee: Mark Abraham
Category: build system
Target version: 
Affected version: git master

Description
As noted in the patch description, it is not a good idea to use mpicc wrappers to XL since this is only true for some cases; users expect these to be wrappers for GCC. The use of mpixl* wrappers is unambiguous and the widely accepted practice on Blue Gene systems.

Use more obvious name of BGQ compiler MPI wrappers

While it is true that mpicc points to the XL compilers when it is the one found in xl.ndebug/bin, this is not generally true and thus the use of mpicc as a wrapper for XL violates the principle of least surprise. the mpixl* wrappers are unambiguous and equally valid.

Fixes #1282
