Description

Hi I tried to compile and install pmetest.c and got the some error messages.
Here is what I did:

follow the installation instruction type ./configure under
gromacs-3.3_rc2, goto the directory of src/contrib/, type make pmetest

The following error message showed up:

```
pmetest.c: In function `main':  
pmetest.c:395: error: too few arguments to function `init_forcerc'  
mpicc: No such file or directory  
make: *** [pmetest.o] Error 1
```

Thank you.

Lei Zhou

History

#1 - 09/20/2005 06:09 PM - Erik Lindahl

Fixed the init_forcerc call, and also surrounded all MPI calls with #ifdef GMX_MPI.
