nice_header() in src/gmxlib/string2.c may dereference NULL pointer

If there exists pwd.h, but the user id cannot be found in password entry, getpwuid() returns NULL pointer. Since the user name is dereferenced without any test, this leads to null pointer dereference (and segmentation fault).

In src/gmxlib/string2.c,

```c
243 #ifdef HAVE_PWD_H
244     uid  = getuid();
245     pw   = getpwuid(uid);
246     gh   = gethostname(buf, 255);
247     user = pw->pw_name;
248 #else
```

Fix is trivial:

```c
user = (pw ? pw->pw_name : unk);
```

Fixed possible dereference of null pointer

getpwuid() can return null. For example, Shun Sakuruba reported that on Cray XE6 compute nodes have passwd.h, but users will not have passwd entries.

Fixes #1301

Note: the problem happened on Cray XE6 system, where the "compute nodes" do not have password entry of users.
