Gromacs - Bug #1385

segfault with multi-node runs and GPU sharing

11/19/2013 02:37 AM - Szilárd Páll

**Description**

When running on more than one physical nodes with GPU, under certain circumstances (but quite often), a segmentation fault occurs; e.g. on a Cray XK7 with 8 ranks per node and two nodes:

```
OMP_NUM_THREADS=2 aprun -cc none -n 16 -N 8 -d 2 mdrun_mpi -npme 0 -pin on -nb gpu -gpu_id 00000000
```

Fix DD load balancing bug with GPU sharing

The recent DD load balancing fix which solved the issue of incorrect imbalance measure with GPU sharing (ba8232e9) addressed GPUs with incorrect indexing. This caused out of bounds indexing in the GPU ID query function. The query function also had a bug in the error checking which allowed the incorrect indexing.

Now also mdrun -nb cpu -gpu_id ... is allowed, which before would give a fatal error.

This commit addresses both issues; fixes #1385

Change-Id: I2800f610b873da92afe78bbfd869258f378ba2d7

**History**

#1 - 11/19/2013 02:53 AM - Szilárd Páll
- Status changed from New to In Progress
- Assignee changed from Berk Hess to Szilárd Páll

The bug is triggered by incorrect GPU ID indexing with Nranks > 2 and GPU sharing among ranks:
