Gromacs - Bug #1606

mdrun PME tuning can results in too short cut-offs

Description

With uncommon tpr inputs where the PME grid is much finer than the requested fourier-spacing (see issue 1605), the PME tuning in mdrun can produce Coulomb cut-off shorter than the original Coulomb cut-off and shorter than the VdW cut-off. Since rcoulomb < rvdw is not supported in the Verlet cut-off scheme, this might lead to incorrect results.

Revision d3e2d78f - 09/29/2014 05:03 PM - Berk Hess
Avoid PME tuning decreasing rcoulomb
With mdrun input with the grid much finer than fourier-spacing, PME tuning could reduce rcoulomb below the starting value. Fixes #1606.
