Gromacs - Bug #1712

bug(?) with -multidir and single directory

04/01/2015 04:49 PM - Viveca Lindahl

Status: Closed
Priority: Normal
Assignee: Erik Lindahl
Category: Target version:
Affected version - extra info:
Affected version: git master

Description
'mdrun -multidir my_directory' behaves the same as simply 'mdrun', i.e. starts to look for a tpr in the current directory. A better behavior in my opinion would be to either 1) start running in "my_directory" or 2) give an error.

Revision 4107b6ba - 06/20/2015 07:30 PM - Erik Lindahl
Handle multidir/multisim with single argument correctly

Mdrun would only initialize the multi option correctly with more than one argument, which caused mdrun to fail in strange ways since it looked for topol.tpr in the current directory instead.

Fixes #1712.
