Target version:		
Difficulty:	simple	
Description		
<p>The method of selection with GROMACS tools is powerful and flexible http://manual.gromacs.org/documentation/current/onlinehelp/selections.html</p> <p>However, that power and flexibility means many users struggle with working out the correct syntax to use, particularly if they are a more casual user. Propose to gather a more extensive list of examples http://manual.gromacs.org/documentation/current/onlinehelp/selections.html#selection-examples to assist with this. I'll gather them together here, or in what ever form is best to be then incorporated into the documentation.</p> <p>Redmine issue opened as suggested by https://twitter.com/GMX_TWEET/status/1139464352812212225</p>
