Description

Created an attachment (id=386)
removes duplicate filenames in include/Makefile.am

Automake 1.11 has changed the way it handles /usr/bin/install calls:

- The targets `install' and `uninstall' are more efficient now, in that for example multiple files from one Automake variable such as `bin_SCRIPTS' are copied in one `install' (or `libtool --mode=install') invocation if they do not have to be renamed.

These changes may need some adjustments from users: For example, some `install' programs refuse to install multiple copies of the same file in one invocation, so you may need to remove duplicate entries from file lists.

include/Makefile.am does indeed have a pair of duplicate entries, causing GNU install to fail; the attached patch removes the extras.

Associated revisions

Revision c93db851 - 10/30/2009 12:58 PM - Nicholas Breen

Removed duplicate files from include/Makefile.am.

Patch from bug #344.

History

#1 - 10/30/2009 03:59 PM - Teemu Murtola

Applied the provided patch to the release-4-0-patches branch. The master branch does not seem to contain these duplicates.
