GROMACS - Task #645

Remove autoconf-related files / port to CMake

01/08/2011 09:50 PM - Teemu Murtola

Status:	Closed	
Priority:	Low	
Assignee:	Mark Abraham	
Category:	build system	
Target version:	4.6	
Difficulty:	uncategorized	

Description
During the reorganization of the source tree, it would be pain to maintain both build systems, so it's better to completely remove the autoconf files to keep from confusing people. Doing this in separate commits will make it relatively easy to resurrect them if the need arises.

Files from the directories that have already been moved were removed in commit 47d686b.

Associated revisions

Revision b9767b58 - 01/23/2011 05:27 PM - Teemu Murtola

Removed most autoconf-related files.

Left a few Makefile.am files that contained logic that could be useful to migrate to CMake before removing those files. Also, clean-up of README files etc. is still to be done.

IssueID #645

Revision 600299a6 - 05/05/2012 08:06 AM - Teemu Murtola

Removed autoconf version info generation.

Since autoconf is no longer supported, there is no need for this shell script either.

IssueID #645

Revision 26bd5f7a - 07/05/2012 10:26 PM - Roland Schulz

Build man-pages instead of distributing them in the source

One less thing to do manual for releasing the code. And thus avoiding to accidental releasing which old version of man-pages.

Writing copyright notice to stderr for all programs (was inconsistent) and caused copyright notice to be displayed during build.

The CPack source package continues to contain the man pages pre-build. CPack verifies that they are genenerated before building the source package.

Added .isreposource to distinquish code obtained from git from code downloaded as CPack source package.

Related to #645, #854, #735
Fixes #878

History

#1 - 01/23/2011 05:32 PM - Teemu Murtola

- *Status changed from New to In Progress*

- *% Done changed from 0 to 80*

Most autoconf build system files have now been removed, as well as autoconf-specific entries in .gitignore files. README, INSTALL, etc. still need to
be updated.

#2 - 09/24/2011 06:31 PM - Teemu Murtola

- *Project changed from Source code reorganization to GROMACS*

Moved to the main Gromacs project.

#3 - 09/24/2011 06:37 PM - Teemu Murtola

- *Subject changed from Remove autoconf-related files to Remove autoconf-related files / port to CMake*

- *Category set to build system*

- *Assignee set to Mark Abraham*

- *Target version set to 4.6*

- *% Done changed from 80 to 0*

It has now been decided that there is a 4.6 release, and that autoconf support will be dropped already there, so the commits from master should be
backported to the release-4-6 branch.

The autoconf files referred to in b9767b58 (those that contain significant logic not present in CMake) are at least the following:
- src/contrib/Makefile.am
- share/template/Makefile.am

#4 - 12/28/2012 08:39 PM - Erik Lindahl

- *Status changed from In Progress to Closed*

No more autoconf files remaining in the release-4-6 tree as far as I can tell.
