enable command-line option checking in tools

Command line option checking has been recently enabled in mdrun, but there are a few tools in which this still needs to be fixed: g_tune_pme, g_pme_error, g_membed. The rewriting/fixing of these tools for 4.6 is ongoing and should include this task before the submission of the new code.

Revision 5a784fff - 04/16/2012 12:08 AM - Szilárd Páll
enable command line option checking in mdrun

Command line option checking has been disabled in mdrun. This can cause unexpected issues e.g. when mdrun disregards an option with a typo.

Note that a few tools (g_tune_pme, g_pme_error, and g_membed) also omit option checking, but these either rely on this "feature" or are in process of rewriting/fixing for 4.6 which will implement the checkin. refs #922
